

## AMENDMENTS TO THE CLAIMS

Without prejudice, please amend the claims as reflected in the following listing of claims, which will replace all prior versions and listings of claims in the application:

### Listing of Claims:

1. (Currently amended) A method of building a presentation, the method comprising:
  - a) accessing a page including a plurality of multimedia content from a multimedia source through a multimedia content application;
  - b) receiving user selection input while at least some of said plurality of multimedia content is being played by said multimedia content application, to activate a ~~concurrent~~ presentation window and automatically cause said page ~~multimedia content accessed by said multimedia content application to be presented appear~~ in a preview window of said presentation window to identify multimedia content to be included in said presentation; and
  - c) copying said page including said plurality of multimedia content identified as to be included in said presentation, displayed in ~~said preview window~~ from said multimedia source to memory, for access by a presentation application.
2. (Currently amended) The method claimed in claim 1 wherein copying comprises copying said plurality of multimedia content from said multimedia content application while said multimedia content application is using said plurality of multimedia content.

3. (Currently amended) The method claimed in claim 1 further comprising associating an identifier with said plurality of multimedia content, for access by the presentation application.
4. (Currently amended) The method claimed in claim 3 wherein associating an identifier comprises associating a uniform resource locator with said plurality of multimedia content.
5. (Currently amended) The method claimed in claim 4 wherein associating an identifier comprises associating with said plurality of multimedia content a uniform resource locator identified by an application using said plurality of multimedia content.
6. (Currently amended) The method claimed in claim 1 further comprising associating user-definable notes with said plurality of multimedia content, for use by the presentation application.
7. (Currently amended) The method claimed in claim 1 further comprising producing a multimedia content record accessible by the presentation application, said multimedia content record including a link to said plurality of multimedia content in said memory.
8. (Currently amended) The method claimed in claim 7 further comprising producing said multimedia content record such that it includes an identifier associated with said plurality of multimedia content.
9. (Cancelled)
10. (Cancelled)
11. (Cancelled)
12. (Cancelled)

13. (Cancelled)

14. (Currently amended) A computer-readable medium for providing processor-readable instructions for directing a processor circuit to build a presentation while a page including a plurality of multimedia content from a multimedia source is being accessed by the processor circuit through a multimedia content application running on the processor circuit, the instructions directing the processor circuit to:

- a) receive user selection input while at least some of said plurality of multimedia content is being played by said multimedia content application, to activate a ~~concurrent~~ presentation window and automatically cause said ~~page multimedia content accessed by said multimedia content application to be presented~~ appear in a preview window of said presentation window to identify multimedia content to be included in said presentation; and
- b) copy said page including said plurality of multimedia content displayed in said preview window identified as to be included in said presentation, from said multimedia source to memory, for access by a presentation application.

15. (Currently amended) A signal readable by a computer, said signal comprising code segments for directing a processor circuit of the computer to build a presentation while a page including a plurality of multimedia content from a multimedia source is being accessed by the processor circuit through a multimedia content application running on the processor circuit, the code segments including:

- a) a first code segment for directing the processor circuit to receive user selection input while at least some of said plurality of multimedia content is being played by said multimedia content application, to activate a ~~concurrent~~ presentation window and automatically cause said ~~page multimedia content accessed by~~

~~said multimedia content application to be presented appear~~ in a preview window of said presentation window to identify multimedia content to be included in said presentation; and

- b) a second code segment for directing the processor circuit to copy said page including said plurality of multimedia content ~~displayed in said preview window identified as to be included in said presentation,~~ from said multimedia source to memory, for access by a presentation application.

16. (Currently amended) An apparatus for building a presentation, the apparatus comprising:

- a) means for accessing a page including a plurality of multimedia content from a multimedia source through a multimedia content application;
- b) means for receiving user selection input while at least some of said plurality of multimedia content is being played by said multimedia content application, to activate a ~~concurrent~~ presentation window and automatically cause said page ~~multimedia content accessed by said multimedia content application to be presented appear~~ in a preview window of said presentation window to identify multimedia content to be included in said presentation; and
- c) means for copying said page including said plurality of multimedia content ~~displayed in said preview window identified as to be included in said presentation,~~ from said multimedia source to memory, for access by a presentation application.

17. (Currently amended) An apparatus for building a presentation, the apparatus comprising:

- a) a processor circuit configured to access a page including a plurality of multimedia content from a multimedia source through a multimedia content application;
  - b) a receiver operable to receive user selection input while at least some of said plurality of multimedia content is being played by said multimedia content application, to activate a concurrent presentation window and automatically cause said page multimedia content accessed by said multimedia content application to be presented appear in a preview window of said presentation window to identify multimedia content to be included in said presentation; and
  - c) a copying device for copying said page including said plurality of multimedia content ~~displayed in said preview window~~ identified as to be included in said presentation, from said multimedia source to memory, for access by a presentation application.
18. (Currently amended) The apparatus claimed in claim 17 wherein said copying device comprises a processor circuit programmed to copy said plurality of multimedia content from said multimedia content application running on said processor circuit, while said multimedia content application is using said plurality of multimedia content.
19. (Currently amended) The apparatus claimed in claim 17 further comprising a processor circuit programmed to associate an identifier with said plurality of multimedia content, for access by the presentation application.
20. (Currently amended) The apparatus claimed in claim 19 wherein said processor circuit is programmed to associate a uniform resource locator with said plurality of multimedia content.

21. (Currently amended) The apparatus claimed in claim 20 wherein said processor circuit is programmed to associate with said plurality of multimedia content a uniform resource locator identified by an application using said plurality of multimedia content and running on said processor circuit.
22. (Currently amended) The apparatus claimed in claim 17 further comprising a processor circuit programmed to associate user-definable notes with said plurality of multimedia content, for use by the presentation application.
23. (Currently amended) The apparatus claimed in claim 17 further comprising a processor circuit programmed to produce a multimedia content record accessible by the presentation application, said multimedia content record including a link to said plurality of multimedia content in said memory.
24. (Currently amended) The apparatus claimed in claim 23 wherein said processor circuit is programmed to produce said multimedia content record such that it includes an identifier associated with said plurality of multimedia content.
25. (Previously presented) The apparatus claimed in claim 17 wherein said means for accessing, said receiver and said copying device are provided by a processor circuit programmed to run said multimedia content application.
26. (Original) The apparatus claimed in claim 25 wherein said processor circuit is programmed to use said multimedia content application to access multimedia content selectable by a user.
27. (Cancelled)
28. (Cancelled)

- 29. (Cancelled)
- 30. (Cancelled)
- 31. (Cancelled)
- 32. (Cancelled)
- 33. (Previously presented) The method claimed in claim 1 further comprising displaying previously copied multimedia content in respective preview windows in said presentation window.
- 34. (Previously presented) The method claimed in claim 3 further comprising displaying said identifier in association with said preview window.
- 35. (Previously presented) The apparatus claimed in claim 17 further comprising means for displaying previously copied multimedia content in respective preview windows in said presentation window.
- 36. (Previously presented) The apparatus claimed in claim 19 further comprising means for displaying said identifier in association with said preview window.
- 37. (New) The method of claim 1 wherein said multimedia content application comprises a browser and wherein accessing said plurality of multimedia content comprises accessing a web page with said browser.
- 38. (New) The method of claim 1 wherein copying said plurality of multimedia content comprises copying multimedia content of more than one type to said memory.

39. (New) A method of building a presentation, the method comprising repeating the method of claim 1 in respect of each of a plurality of pages having multimedia content to be included in said presentation.

40. (New) The method of claim 39 further comprising storing, in a presentation file, an indication of an order in which said plurality of pages in said memory are to be accessed by said presentation application.

41. (New) A method of building a presentation using a presentation file, the method comprising:

for each of a plurality of pages including respective multimedia content:

- a) accessing a page including its multimedia content, from a multimedia source through a multimedia content application;
- b) in response to user selection input received while at least some of said multimedia content is being played by said multimedia content application, activating a presentation window and automatically causing said page to be presented in a preview window of said presentation window to identify multimedia content to be included in the presentation;
- c) copying said page including said multimedia content identified as to be included in the presentation, from said multimedia source to memory;
- d) producing a content record associating said page and said multimedia content in said memory; and
- e) storing said content record in the presentation file such that said page and said multimedia content in said memory are included

in the presentation in a specific order relative to other pages and their respective multimedia content included in the presentation;

wherein the presentation file is operable to be used by a presentation application for accessing, in said specific order, respective multimedia content associated with respective pages included in the presentation.
